

# WORKSHOP #2

Tomás Cárdenas Benítez - 20221020021

When analyzing the project, it was important to know that there is an existence of a possible *abstract factory*, that is because it should be created a gas and electric engine, apart from that it is possible to see that it needs to be created another two variables: being the first cheap and the other one expensive. Also there can be an inheritance form the class vehicle to every other possible selling vehicle
